Since its introduction, AutoCAD has been in continuous development. Over the past 30 years, AutoCAD has gone through several major revamps of the software's internal architecture, and has had at least one major release of the graphic display and user interface every year, typically every 2 to 3 years. The latest major revamp was in 2016, and included a redesigned user interface, and new workgroup, mobile, and cloud versions of the software. History 1982-1999: Development of AutoCAD continues until 1999. 2000-2006: AutoCAD 2002, the first major release in 20 years. 2007-2016: "AutoCAD 2009 R2, 2nd major release of AutoCAD in the 21st Century." 2017-present: "AutoCAD 2019, the first major release in over 3 years." 2018: AutoCAD Subscription, a subscription service for AutoCAD from Autodesk, was launched. It includes AutoCAD LT, a free version of AutoCAD, as well as other Autodesk products like AutoCAD WS, Avia, Inventor, Fusion 360, and other BIM (Building Information Modeling) software and apps. 2018: The 2018 industry survey results from the CAD360®, the survey on the CAD market by Dassault Systèmes, predicts that the annual global market for CAD/CAM/CAE/PLM software is set to reach $71.4 billion by 2022. The survey also projects the global market for CAD/CAM/CAE/PLM software to grow at a compound annual growth rate (CAGR) of approximately 6% during the forecast period. As part of AutoCAD's use of the DXF, the dxf (drawing exchange format) files are linked together by another format, the shared variable list (SVL) file. The files are combined using a common core file called the drawing entity. The drawing entity is a file format based on the XML standard. It was developed in collaboration with Autodesk; the file's structure was based on the Open XML format. The drawings are based on a set of properties, called entities, which are hierarchical, (linked, linked by a common parent, linked by a common parent...). These properties are named and value-tagged. The tag can be text or numeric. Text tags are stored in a tag cache (tag cache) based on character sets. Each tag is mapped to a space-limited value string stored in the value string cache (value string cache). The drawing entity also includes a list of attribute-tagged entities (attribute entities) to be embedded in the drawing. The attribute entities are attached to the entity using their tag. Each entity can have a type (e.g., line, text, dimension, annotation). The dxf was introduced with AutoCAD 2013. Herein, the design of a new type of sensing probe is described. The new probe is based on the combination of a stem-loop-enhanced ribozyme with graphene oxide (GO). GO acts as an electron donor to reduce the oxidized cytochrome c and transfer the reduced product to the stem-loop-enhanced ribozyme, thereby triggering the cleavage of the target RNA. Thus, the stem-loop-enhanced ribozyme can be used as a sensing probe to realize selective and sensitive detection of target RNA. In addition, GO can be used as a potential drug carrier in the target RNA detection. The probe can achieve both high selectivity and sensitivity for the target RNA by simply changing the stem-loop structure of the ribozyme. The CFL will start play in 2020, but instead of in August or September, like the other major sports, the start of the regular season will be delayed until mid-June. "We're excited that we're going to get to make the game more accessible to the fans," CFL commissioner Randy Ambrosie said Friday at the league's annual general meeting. "Not only will fans be able to watch and they're going to be able to watch on more devices than ever before." The league said it's looking for potential partners to broadcast the new online season. The other major sports in Canada -- and the U.S. -- had already announced a move to a summertime schedule in the U.S. this year. "We think it's the right thing to do," said Ambrosie, who moved to Toronto in December to take over as commissioner. "We look at the other leagues and they're doing it. We'll see what happens." The pro hockey, baseball and basketball seasons are all starting this month. Ambrosie said the CFL is going to be "aggressive" in attracting new fans and offering a better experience to existing fans. He cited the league's digital transformation as one of the primary reasons for the shift to a June schedule. The major sports have been racing to market CFL games on multiple platforms, including TV and streaming services. But Amb
