HDCleaner 2015.1.6 was released on 19 October 2015. The main feature of the new release is the ability to preserve the selected items as compressed archives. You can then transfer the archive to any disk or removable media, including a USB stick. Before this new version of HDCleaner 2015, these compressed archives contained only the unused space. HDCleaner is the application that allows you to "Get your PC back on track". HDCleaner can be used to erase unwanted Internet history, clean registry and remove temporary files. HDCleaner Description: Create and use your own ZIP archive with a simple and clear interface. A lot of options make it easy to compress many files. An additional folder can be created, allowing you to easily organize your files. There is no manual required, because there is no configuration. HDCleaner will create a ZIP archive of your files in the normal user folder (where you usually store files). So if you have an archive and want to easily remove it, use this tool: simply choose which files you want to remove and where you want to save them. You can create a ZIP archive with or without compression. It can be used to encrypt the files, or remove the files from the disk, so they can not be restored later. You can easily transfer the files to a USB stick or CD/DVD. HDCleaner Features: The new version of HDCleaner allows you to combine several previous files into one archive. You can also set the level of compression. If you want to encrypt your files before removing them, HDCleaner allows you to combine the encryption with the zip compression. The interface is designed to be easy to use, with a large selection of options and a clear design. You can select how many files are combined into one archive. If it is not enough, you can add new files by simply dragging them. You can change the location of the created archive. If you need to keep the archive on a removable drive or CD, you can choose the drive. HDCleaner Features: Note: Because we are developing the site we have to force you to enable the "remember me" function, to prevent you from being asked for your password each time you visit the site. You can find out how to remove this information in your browser (Ctrl+Shift+Del is your friend!). HDCleaner is an easy-to-use and easy

HDCleaner is an easy-to-use program that allows you to remove junk files and other unnecessary files from your system. It can automatically scan your computer for different types of files and delete them. It also allows you to securely and easily shred selected files with a built-in shredder.
